Individual metaphysical reference frame

The individual metaphysical reference frame $\alpha\phi\lambda$,

$$\alpha\phi = \kappa\phi + \psi\phi + \delta\phi + \lambda\phi,$$

is proposed as not physical without time. [2021/06/09 Journal 0 and 1]

The nondeterminism of the metaphysical individual is found at most length scales. We can perform deterministically in special, purposeful contexts, but are generally nondeterministic. The metaphysical situation is fairly represented as a quantum mechanical manifestation of the neurology, or the couple of learning and performance is constructive of an unknown future on any relevant length scale. Temporal linearity is available to physicality (δ), but determinism is not a principal component.

The individual as conceived, here, is strongly related to language. The meaning of linguistic expressions are found by individuals.

$$\lambda\phi \longrightarrow \alpha\phi$$

The availability of information to intercourse is the principal individual empowerment. The communication of

awareness establishes and expands individual horizons, and is the principal social empowerment.

$$\lambda_{\tau} \longleftrightarrow \alpha_{\tau}$$

This individual has invented and employed language to enhance existence by performance. Language is the critical feature of metaphysicality. The $\alpha\phi\lambda$ is available to interpretation as the expression of metaphysicality. The metaphysical individual is sentient (κ), conscious (ψ), mortal (δ), and linguistic (λ).

However, $\alpha\phi\tau$, in contrast to $\alpha\phi\lambda$, might suggest the violation of temporal incompleteness. The processes of reflection require an evolution of thought in time. Reflection is not immediate, and cannot occur immediately. The metaphysical recognition requires or implies elapsed time. The temporal observables available to $\alpha\phi\lambda$ exist as nonlinear and nondeterministic. In contrast, $\alpha\phi\tau$ suggests temporal linearity and determinism are relevant.
