

For the micrometaphysical utility of communication,

$$U_{\kappa} = U_{\alpha} + U_{\beta} + U_{\gamma} + U_{\delta} + U_{\sigma},$$

we describe a profit within U_{ψ} as $U_{\psi} > U_{\sigma}$ and a loss within U_{ψ} as $U_{\psi} < U_{\sigma}$. Likewise, we may describe a profit within U_{ψ} as $U_{\psi} > U_{\gamma}$. An informational utility is positive when $U_{\psi} > U_{\gamma} + U_{\delta}$. Therefore, informational utility is $U_{\alpha} + U_{\beta} + U_{\sigma}$. And, sensual utility is $U_{\alpha} + U_{\beta} + U_{\delta} + U_{\sigma}$.

When

$$U_{\psi} < U_{\alpha}$$

the income from experience is a loss. In the early twenty first century we are finding this common to the state of being $\beta \gamma \sigma$ in the case of relatively senseless, inane, or irrelevant habits of metaphysical consumption and interaction. This $\beta \gamma \sigma$ represents a state of being we can describe as “lost in macrometaphysical space”. When we experience communication as synthetic experience but not recognized as fiction, or fictive, or fictional, we are in the $\kappa \psi$ subspace $\beta \gamma \sigma$ but not $\alpha \beta \gamma \sigma$. This subspace is detached from, and not relevant to the whole mind-body unity. The pathology is well known. Conversely, $\beta \gamma \sigma$ does not exist without cause. The closed mind is defensive, it fights

without reason or sense until confronted with depth, and then dies.

The value of $\beta \, \gamma \, \sigma$ is less than $\alpha \, \beta \, \gamma \, \sigma$, which is the reason why the breath of life is maximized by maximizing

$$\tau_{\alpha} = \tau_{\beta} + \tau_{\gamma} + \tau_{\delta} + \tau_{\sigma}.$$
