Physical society

In the *global social reference frame* or *physical society*,

$$\sigma_{\phi} = \pi_{\phi} + \lambda_{\phi} + \gamma_{\phi} + \rho_{\phi} + \tau_{\phi},$$

the effective performance of government is inhibited by psychological issues when a binary decision choice is rational (socially positive) or irrational (socially negative). The performance of an irrational choice is a behavioral error attributed to a psychological issue.
