## Experiential sexuality

An existential sexuality begins with the identification and characterization of a relevant epistemological universe. However, an experiential sexuality may begin with simple intimacy. And opening that subject may begin with touch.

It is very easy to think about and to discuss touching without entering into a sexual consciousness, or even a hyper- sexualized intellect. It should be intuitive that touch affords enormous expression that is generally relevant to, and independent of, sexual intercourse.

For example, a handshake deals in ego like voice. Both touch and voice express condition. And condition has an obvious import to sexual intercourse.
